The TTE-B-VA serves as a day tank for supplying units with fuel, urea and lubricating oil. The TTE-B-VA is also known as a storage tank. Due to its structure and features, it meets the requirements for use in emergency power systems in accordance with VDE 107/108. It is suitable for installation in buildings as well as in system containers.

The installation surface must be level, load-bearing and designed as a collecting tray. If there is no collection space available on site, a collection tray must be used. The cubic design of the TTE-B-VA guarantees optimal use of space.
